WE LOVE HEX-N COUNTER GAMES!

Introduction:

This Line-Of-Sight (LOS) collection is designed to help you better understand the LOS rules in the Assault System and deepen your knowledge of them. It is recommended that you have read the v2.0 rulebook carefully beforehand.

If **you** have any questions about other LOS situations or rules, you are welcome to post a message in our forum. We will update this slides:

General Rules Information

Description about the LOS situation

WE LOVE HEX-N COUNTER GAMES!

IMPORTANT: If units are utilising the roads as per MR 9.6.3 Roads and Trails the LOS changes if it can be drawn along the road.

Situation Report:

- US Player announces that he wants to utilise the road to shift his Rifles 43 fast forward.
- GE Sniper in single-storey building wants to use reaction fire (interrupt the US player) at Rifles 43 utilising the roads via a fast action to move quick forward.
- Range is 3 hexes
- The LOS is hindered because it passes over a single-storey building. Due to the rules for roads and trails, Rifles 43 uses the road and not the path over the building. In this case, the LOS can be followed along the road and the multi-storey building does not block the LOS. It is ignored

WE LOVE HEX-N COUNTER GAMES!

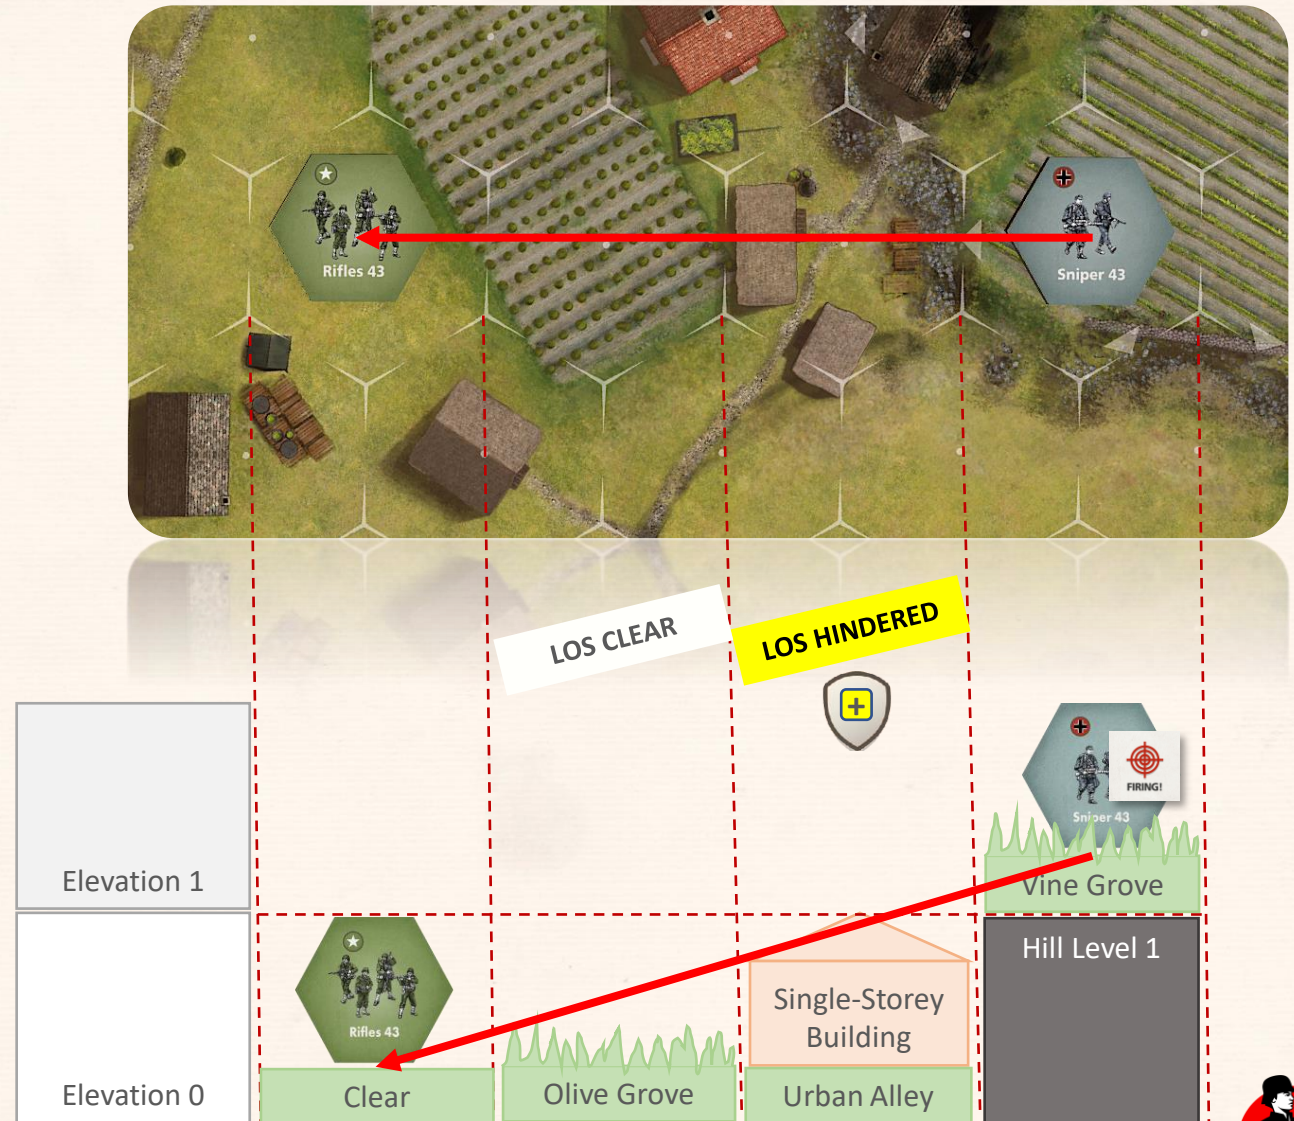

Situation Report:

- GE Sniper in olive grove wants to fire at Rifles 43
- LOS is traced from hex-center to hex center
- Range is 3 hexes
- LOS is clear

Situation Report:

- GE Sniper in vine grove wants to fire at Rifles 43
- Range is 3 hexes
- LOS is hindered because traced via single-storey building. Building gives the defender +1 yellow defense die. Olive grove is no hindrance because of elevation 0

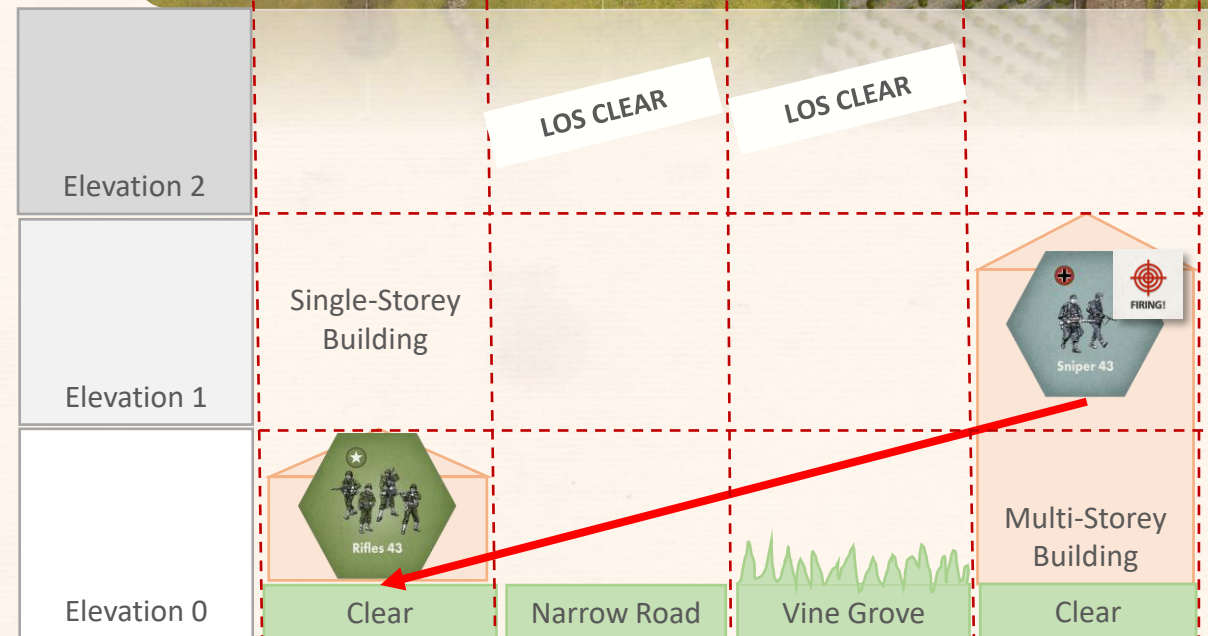

WE LOVE HEX-N COUNTER GAMES!

Important: In general, terrain with LOS relevant elevation of 0, even if it has a LOS modification (hindering), has **NO** influence on the LOS if it is measured via elevation differences!

IMPORTANT: Buildings are separated in LOS relevant elevation impact and elevation for units which are in buildings

Situation Report:

- GE Sniper in multi-storey building. The building itself has a LOS relevant elevation of 2. Infantry units placed in this multi-storey building gain +1 elevation. So this GE Sniper unit is considered at elevation 1 if they are firing.
- Range is 3 hexes
- LOS is clear

IMPORTANT: Buildings are separated in LOS relevant elevation impact and elevation for units which are in buildings

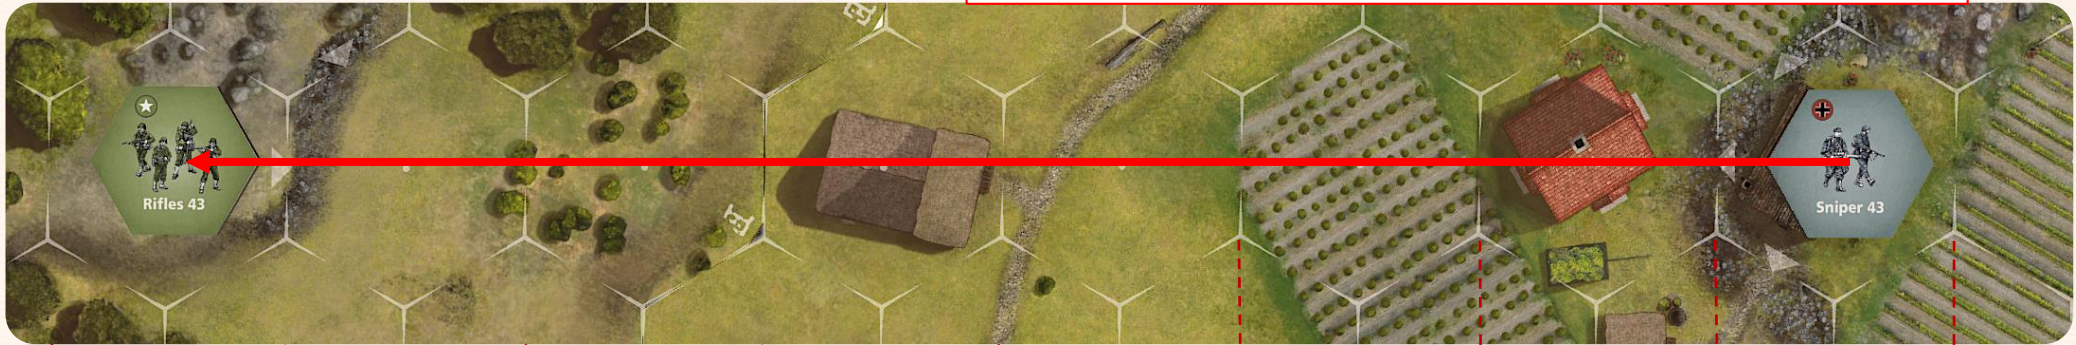

Situation Report:

- GE Sniper in single-storey building. The building itself has a LOS relevant elevation of 1. Infantry units placed in this multi-storey building gain 0 elevation. So this GE Sniper unit is considered at elevation 1 if they are firing.
- Range is 3 hexes
- LOS is hindered because of the multi-storey building

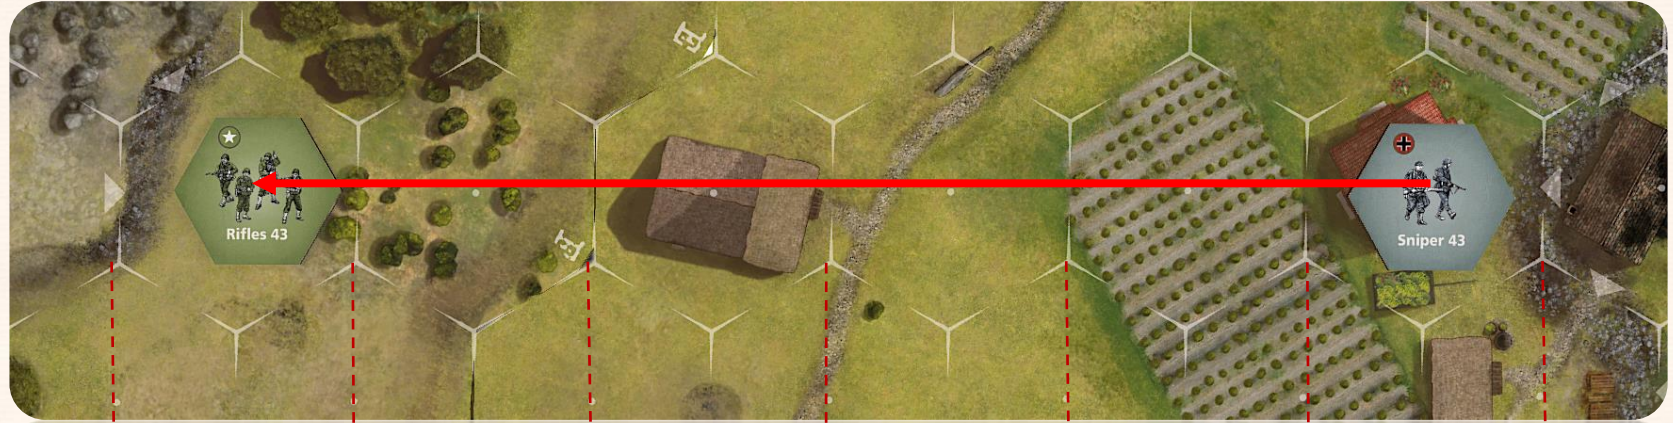

WE LOVE HEX-N COUNTER GAMES!

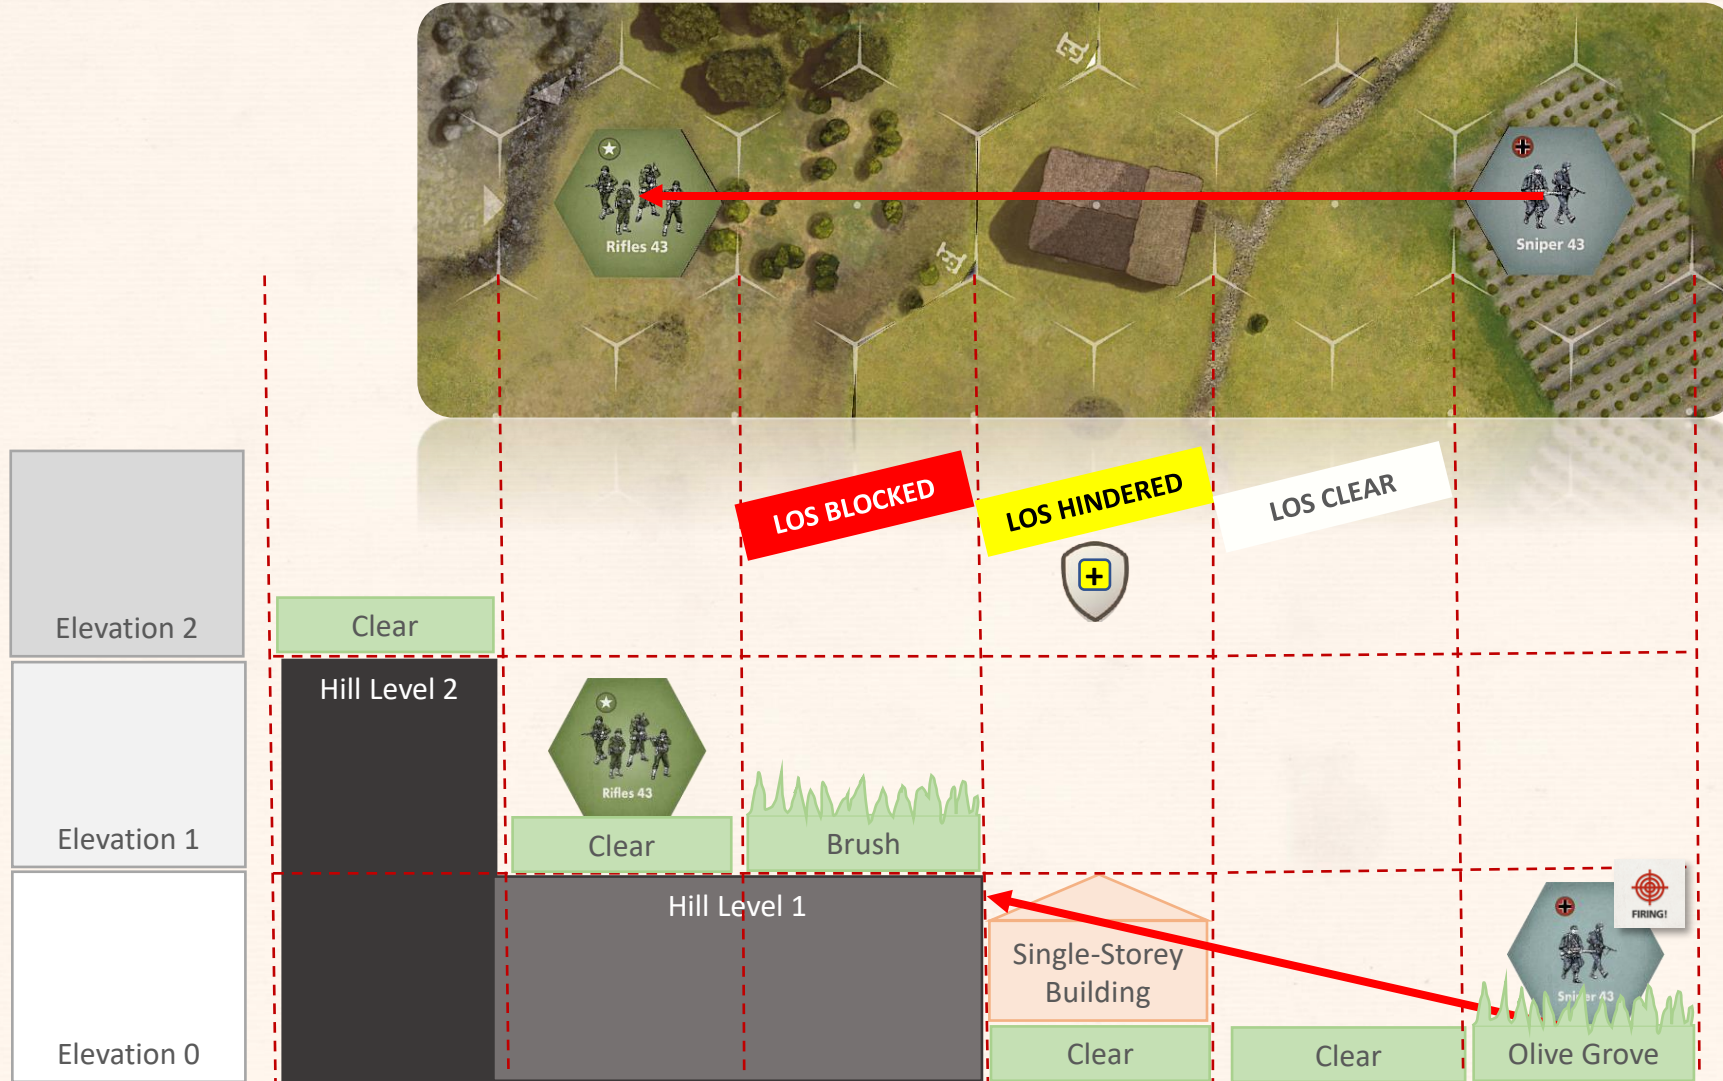

Important: In general, terrain with LOS relevant elevation of 0, even if it has a LOS modification (hindering), has **NO** influence on the LOS if it is measured via elevation differences!

Situation Report: GE Sniper in single-storey building on a hill level 1. The building itself has a LOS relevant elevation of 1. Infantry units placed in this multi-storey building gain 0 elevation. So this GE Sniper unit is considered at elevation 1 if they are firing. Range is 7 hexes. LOS is hindered because of the multi-storey building.

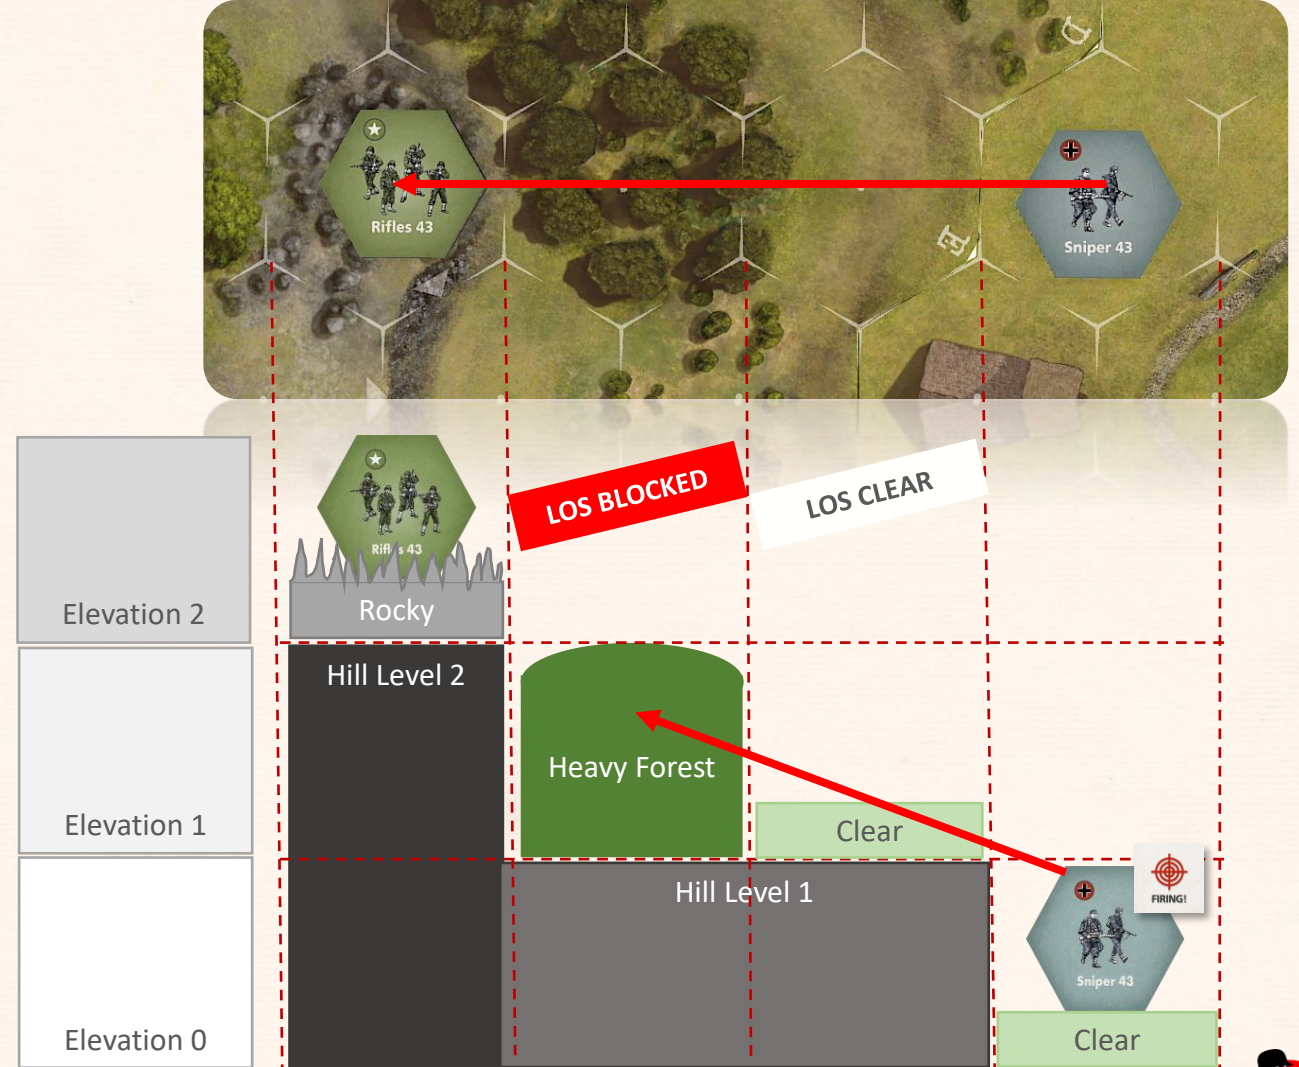

Situation Report: GE Sniper in multi-storey building. Infantry units placed in this multi-storey building gain +1 elevation. So this GE Sniper unit is considered at elevation 1 if they are firing. Range is 5 hexes. LOS is hindered because of the brush on the level 1 hill.

Situation Report: GE Sniper in olive grove on elevation 0. Range is 4 hexes. LOS is blocked because of the hill level 1 in between the LOS to the Rifles 43 on the second line hill elevation 1.

Situation Report:

- GE Sniper in clear terrain on level 0.
- Rifles 43 are on a level 2 hill in rocky terrain.
- Range is 3 hexes
- LOS is blocked because of the heavy forest which has a LOS relevant elevation of 1. As this heavy forest is on a hex with hill level 1 this hex has a elevation of 2 and LOS has to be drawn through i.

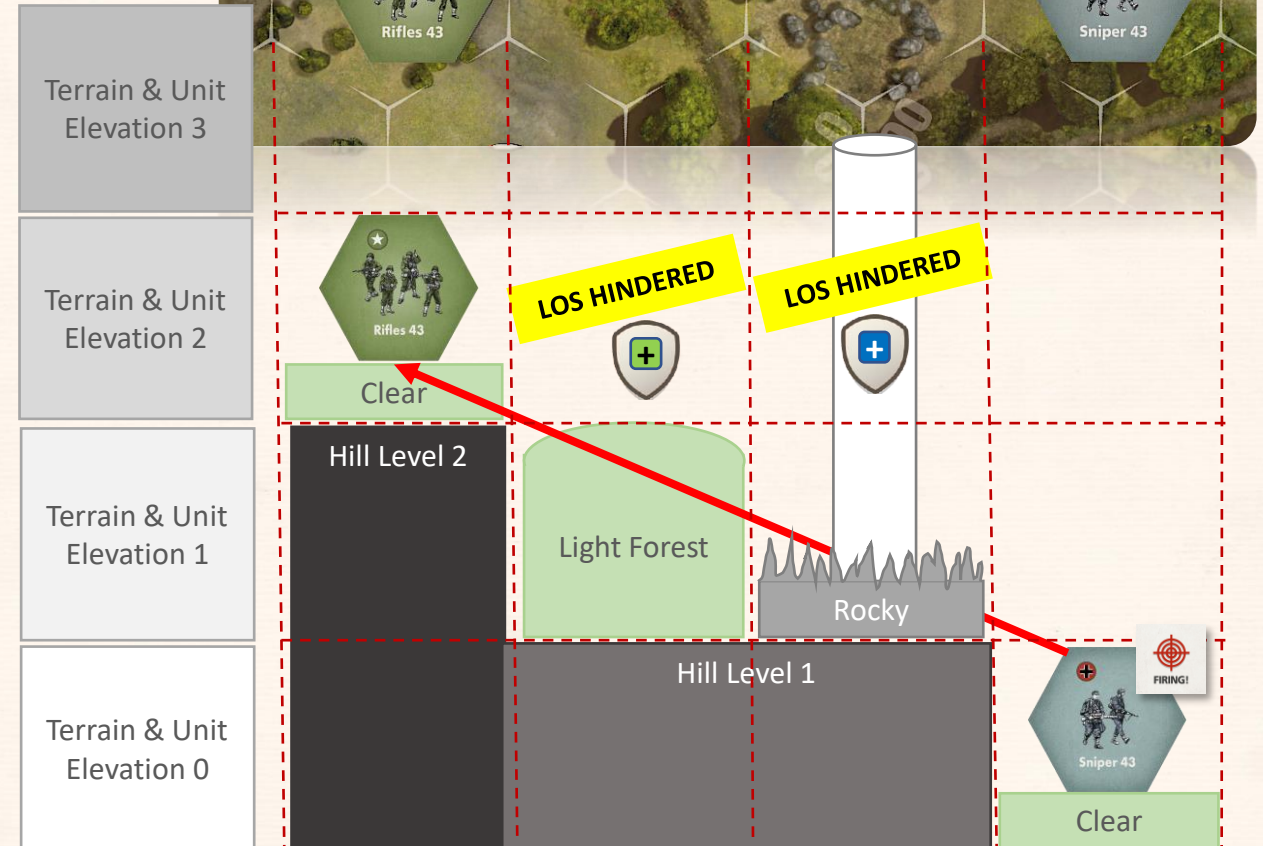

WE LOVE HEX-N COUNTER GAMES!

Situation Report:

- GE Sniper in clear terrain on level 0.
- Rifles 43 are on a level 2 hill in clear terrain.
- Range is 3 hexes
- LOS is hindered because of the the light forest which has a LOS relevant elevation of 1 AND the single smoke marker in that rocky terrain on a hill level 1. The rocky has no LOS relevant, so the LOS runs over it and is not hindered by this terrain. Each smoke marker is ONE LOS relevant hindrance with the elevation of 2 levels. So this LOS is hindered by two features: one smoke marker and the light forest.

Important: In general, terrain with LOS relevant elevation of 0, even if it has a LOS modification (hindering), has **NO** influence on the LOS if it is measured via elevation differences!

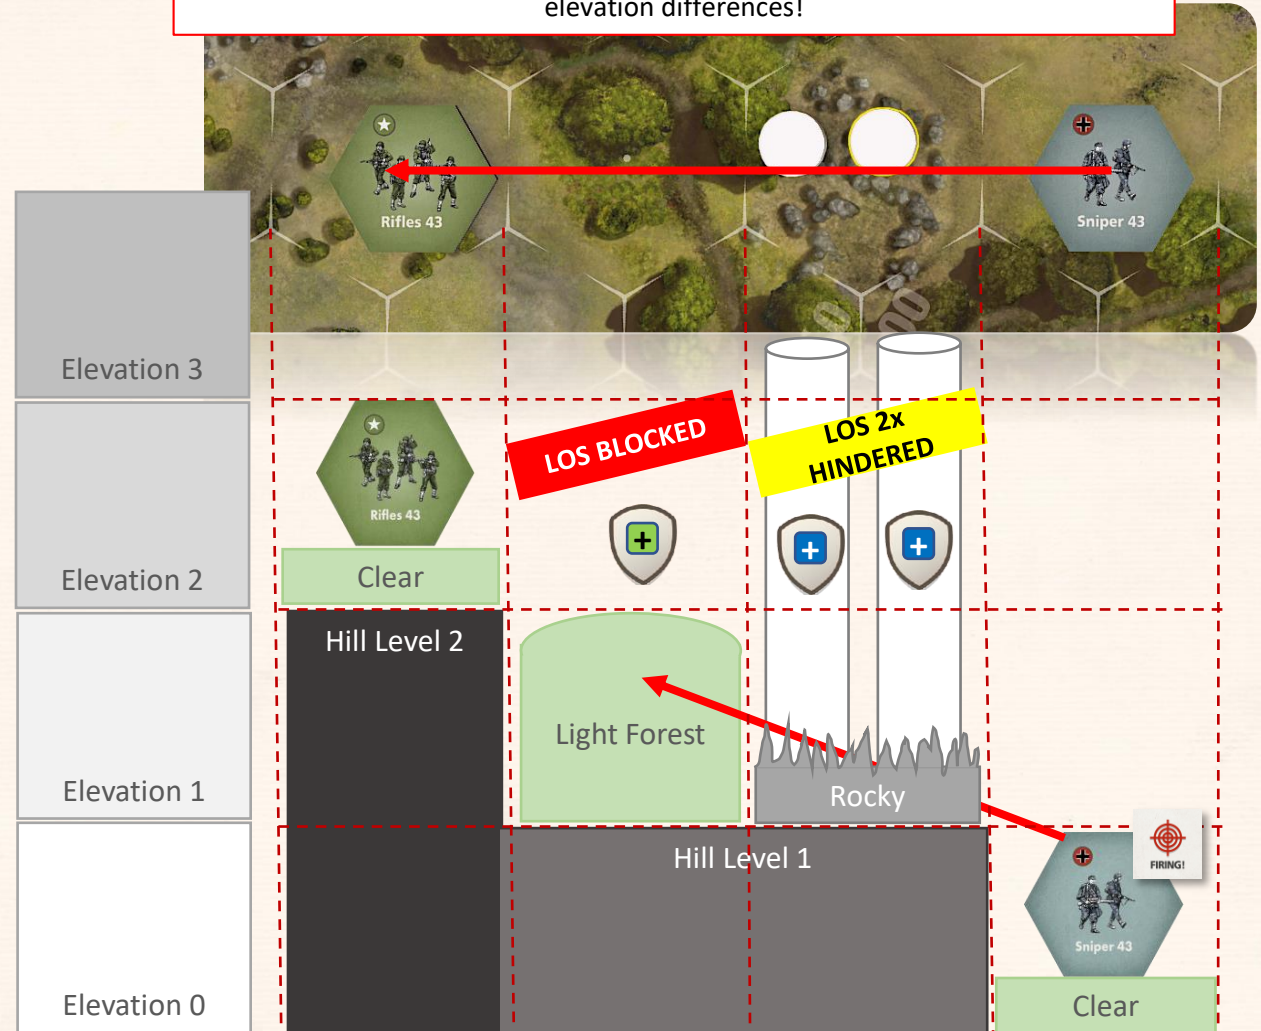

WE LOVE HEX-N COUNTER GAMES!

IMPORTANT: Keep in mind that a LOS is hindered up to two (2) hindering terrain inside LOS. If there is a 3rd hindering terrain the LOS is considered blocked (MR: Checking LOS 10.3)

Situation Report:

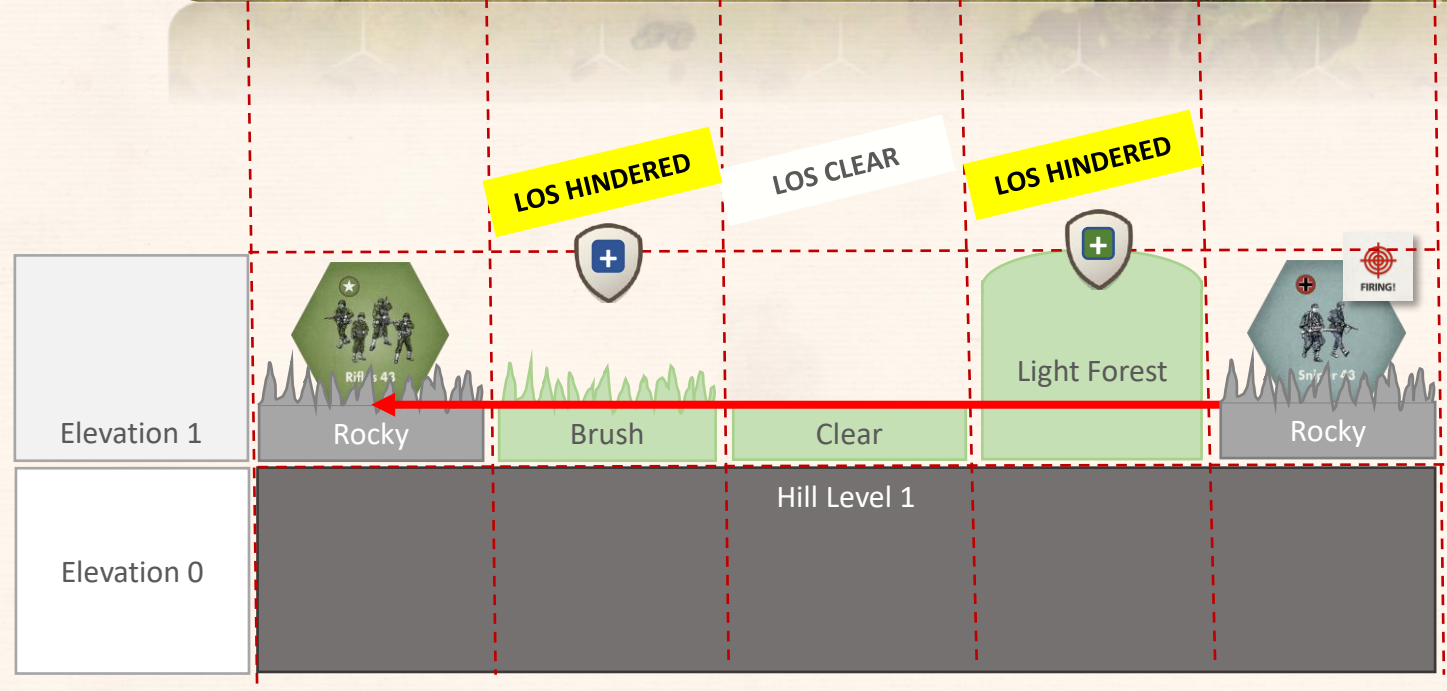

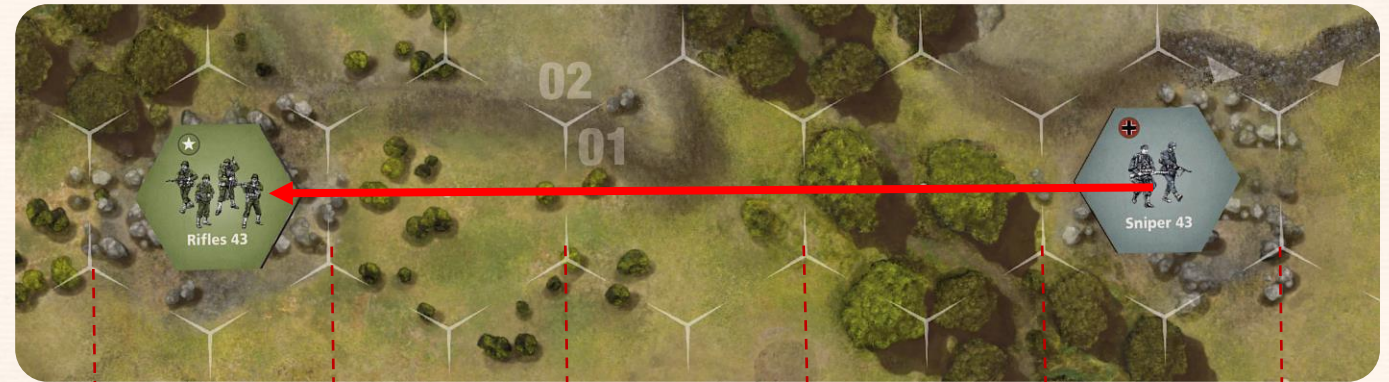

- GE Sniper in clear terrain on level 0.
- Rifles 43 are on a level 2 hill in clear terrain.
- Range is 3 hexes
- LOS is blocked because of the the light forest which has a LOS relevant elevation of 1 AND the 2 smoke markers in that rocky terrain on a hill level 1. Each smoke marker is ONE LOS relevant hindrance with the elevation of 2 levels. So this LOS is blocked by two features: two smoke markers and the light forest.

Important: In general, terrain with LOS relevant elevation of 0, even if it has a LOS modification (hindering), has **NO** influence on the LOS if it is measured via elevation differences!

Situation Report:

- GE Sniper in rocky terrain wants to fire at Rifles 43
- LOS is traced through the light forest (hindering), clear and brush (hindering) terrain hexes.
- Range is 4 hexes
- LOS is hindered due to two (2) hindering terrain inside the LOS track.

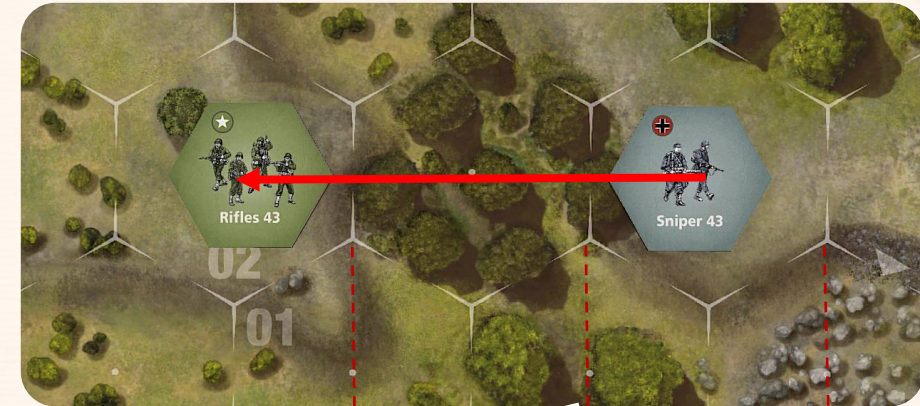

WE LOVE HEX-N COUNTER GAMES!

Situation Report:

- GE Sniper in clear terrain wants to fire at Rifles 43
- LOS is traced over the heavy forest (no influence),
- Range is 2 hexes
- LOS is clear

IMPORTANT: If units are utilising the roads as per MR 9.6.3 Roads and Trails the LOS changes if it can be drawn along the road.

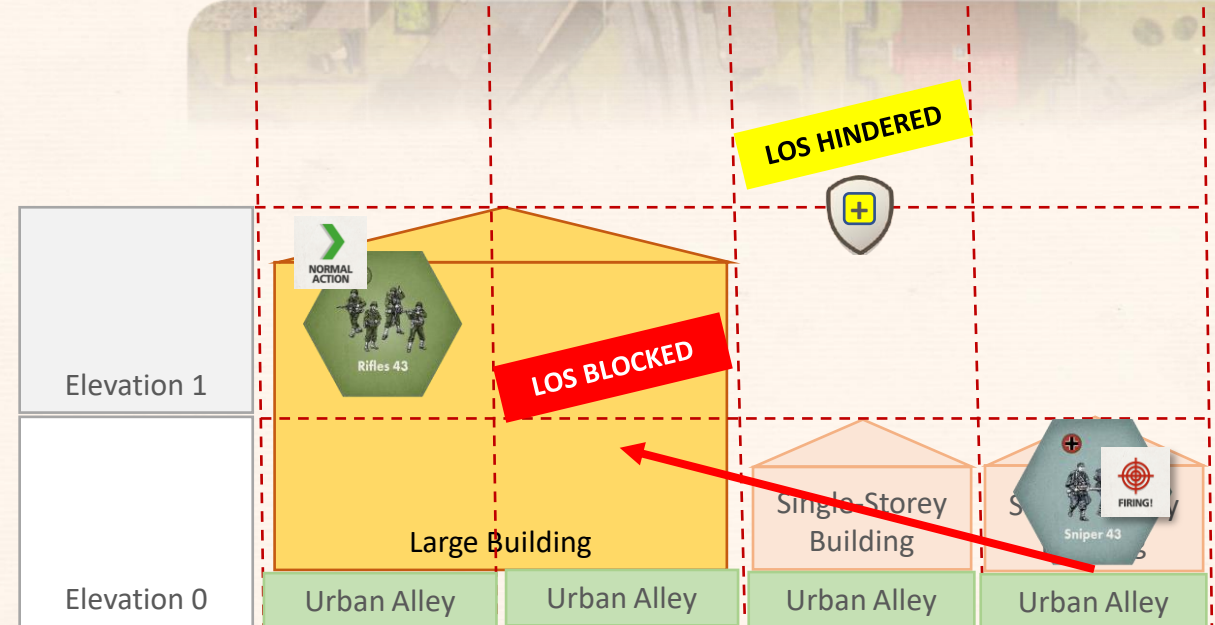

Situation Report:

- US Player announces that he wants to utilise the road to shift his Rifles 43 fast forward.
- GE Sniper in single-storey building wants to use reaction fire (interrupt the US player) at Rifles 43 utilising the roads via a fast action to move quick forward.
- Range is 3 hexes
- The LOS is hindered because it passes over a single-storey building. Due to the rules for roads and trails, Rifles 43 uses the road and not the path over the building. In this case, the LOS can be followed along the road and the multi-storey building does not block the LOS. It is ignored

Situation Report:

- US Player announces that he wants to not utilise the road to shift his Rifles 43 fast forward. Instead he wants to move his Rifles 43 save into that large building.
- GE Sniper in single-storey building wants to use reaction fire (interrupt the US player) at Rifles 43.
- Range is 3 hexes
- The LOS is blocked because it passes over a single-storey building to that large building which blocks.
- Due to the rule for Roads and Trails, the Rifles 43 now use the movement over the large building. This makes them slower but also better protected, as they seek maximum cover in the buildings.

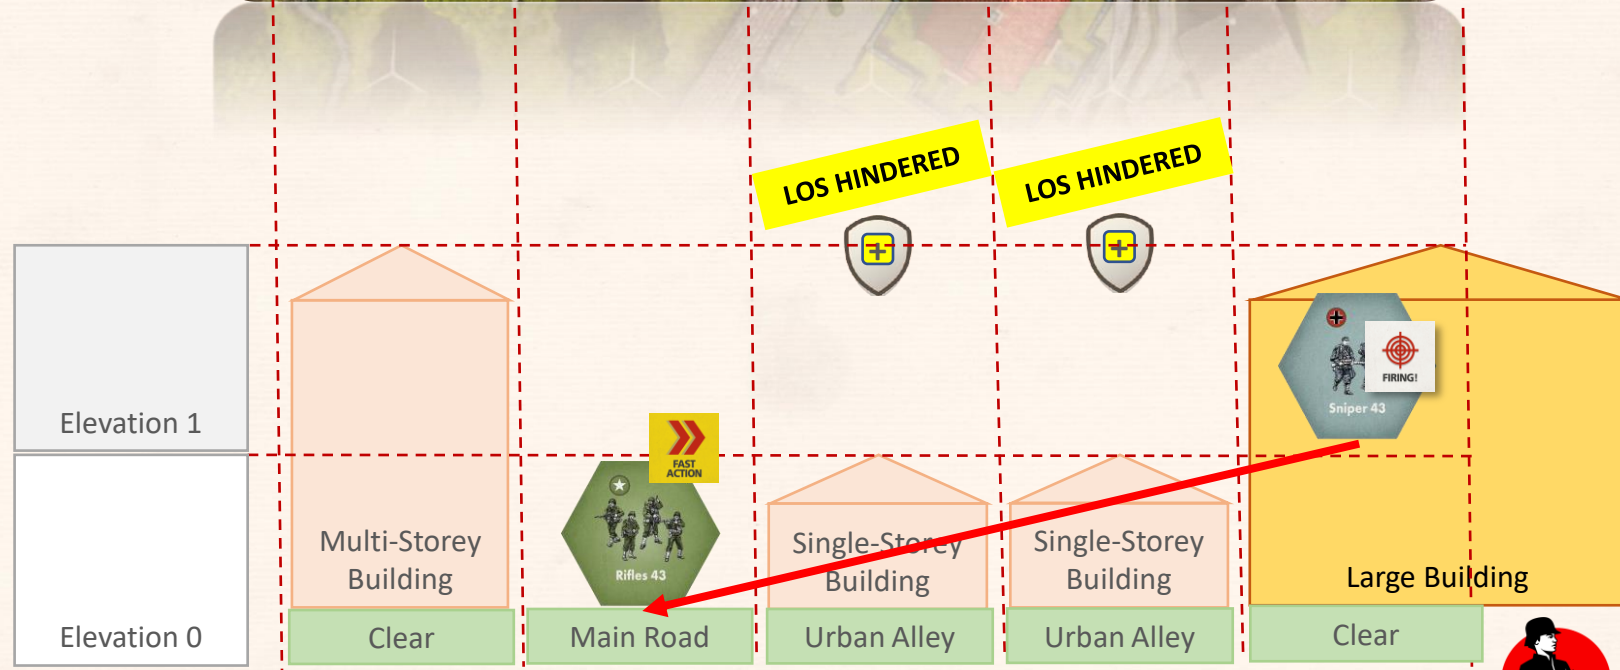

WE LOVE HEX-N COUNTER GAMES!

Situation Report:

- US Player announces that he wants to move his Rifles 43 via the main road into the next single-storey building.
- GE Sniper in single-storey building wants to use reaction fire (interrupt the US player) at Rifles 43.
- Range is 3 hexes
- The LOS is hindered because it passes over two (2) single-storey buildings.
- Due to the rule for roads and trails, the GE sniper cannot trace his LOS along the road as it runs in a different direction. The LOS influences of single-storey buildings must therefore be taken into account.

Situation Report:

- GE Sniper in the multi-storey building wants to fire at Rifles in a single-storey building.
- Range is 5 hexes
- LOS is hindered because traced through two (2) single-storey buildings which have a LOS relevant elevation of 1.

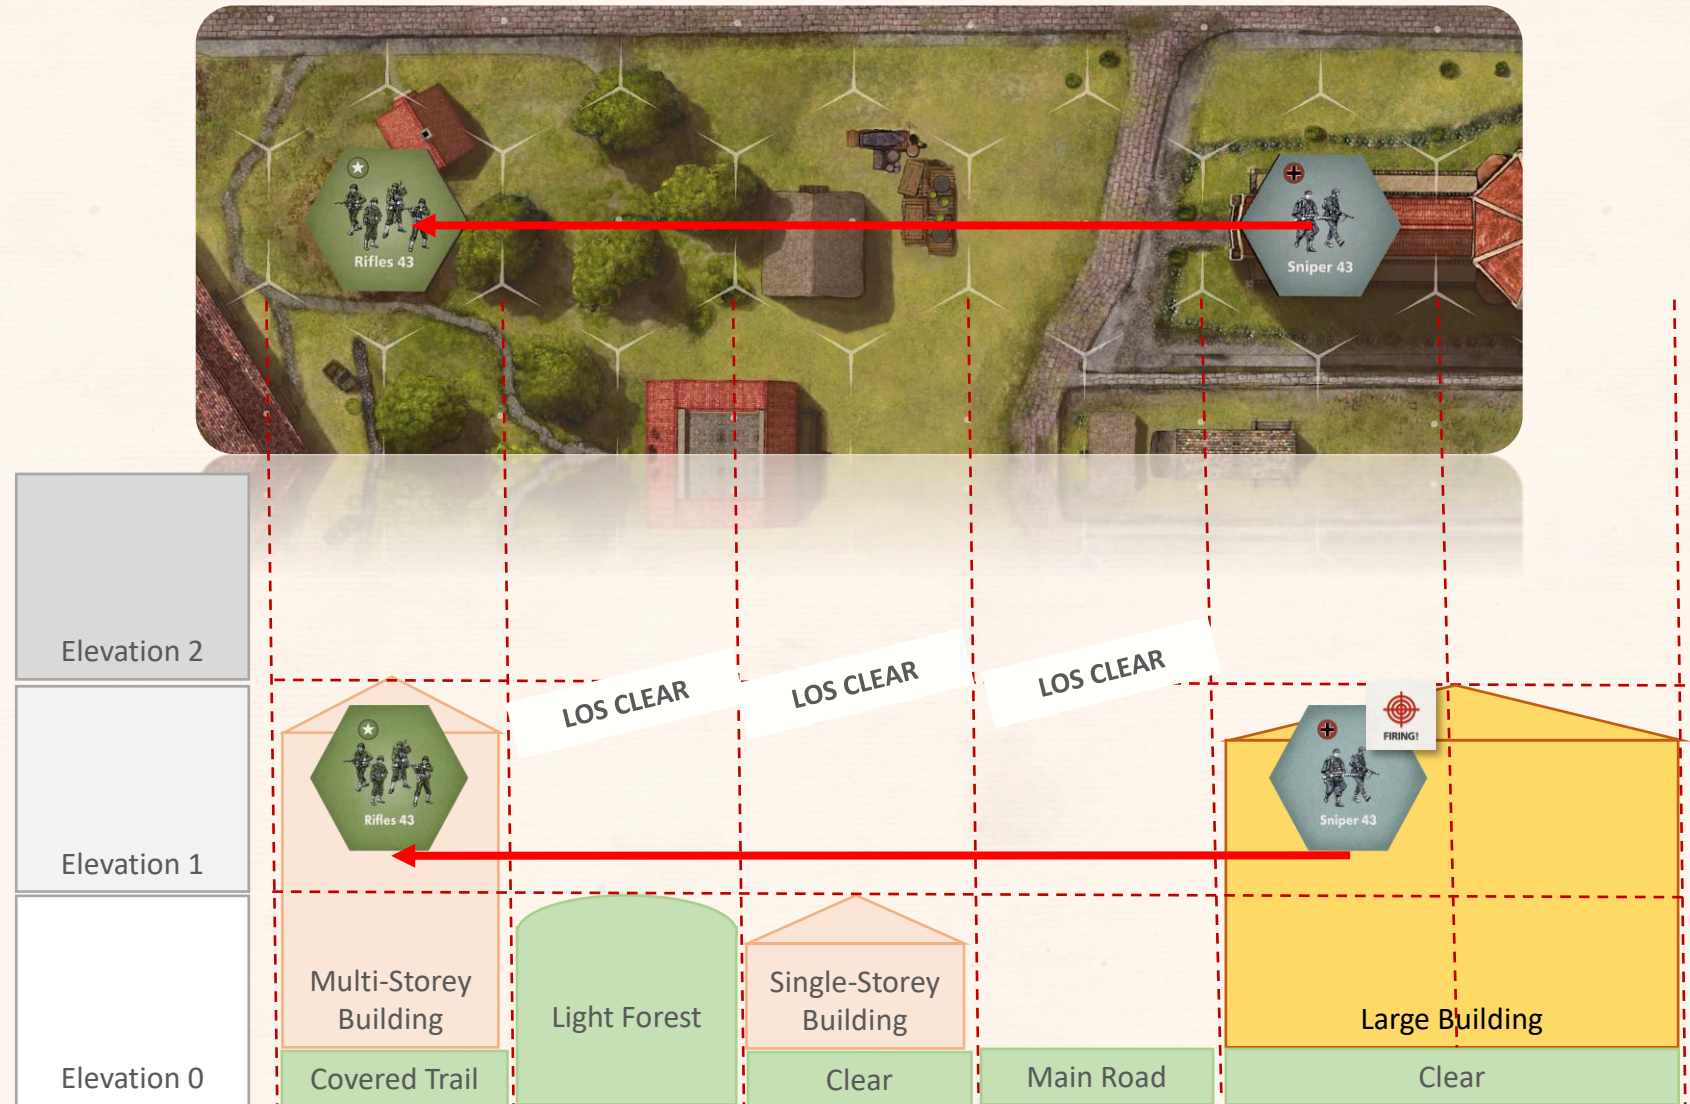

Situation Report:

- GE Sniper in the large building wants to fire at Rifles in a single-storey building.
- Range is 5 hexes
- LOS is blocked because traced to an adjacent large building hex which has a LOS modification „blocked“

Situation Report:

- GE Sniper in the multi-storey building wants to fire at Rifles in a single-storey building.
- Range is 4 hexes
- LOS is clear because traced over a single-storey building and a light forest with LOS relevant elevation of 1.
